ABOUT US

Shravni's Smoking Solutions is a prominent organization dedicated to the design, supply, installation, and maintenance of advanced smoking cabins, smoking cubicles, and innovative cigarette butt management systems. Our services are designed for a diverse range of environments, including corporate parks, IT campuses, shopping malls, Special Economic Zones (SEZs), food parks, green buildings, and various other commercial establishments. Presently, we operate 18 branches across Pune, Mumbai, Bangalore, and Hyderabad.

We place a strong emphasis on hygiene, safety, and environmental responsibility in all aspects of our solutions, which are aimed at effectively managing smoking areas while ensuring that non-smokers benefit from clean and healthy surroundings. Our offerings are characterized by contemporary designs that comply with regulatory requirements, while also prioritizing user comfort and aesthetic quality.

Throughout our history, Shravni's has successfully implemented solutions within leading IT parks, shopping malls, and commercial hubs in Pune and beyond. Our installations incorporate state-of-the-art air filtration technology that adheres to international standards, thereby enhancing the overall user experience while minimizing environmental impact. Each solution is meticulously developed to guarantee operational efficiency and seamless integration into existing facilities, underscoring our commitment to responsible smoking management.

SMOKING IS INJURIOUS TO HEALTH

OUR VISION

To be India's most trusted and responsible partner in smoking zone management by creating cleaner, safer, and environmentally conscious spaces through innovation and global-quality solutions.

OUR MISSION

To provide world-class smoking cabins and cubicles that effectively eliminate smoke, odor, and harmful particles.

To ensure superior hygiene, safety, and compliance in all smoking zones we manage.

To promote environmental responsibility through innovative cigarette-butt collection, recycling, and reuse initiatives.

To deliver reliable, professional service that enhances the experience of employees, visitors, and facility managers alike.

OUR CORE VALUES

Quality First: Uncompromising standards in products, materials, and installation.

Hygiene & Safety: Cleanliness, fire safety, and health protection at the core of every solution.

Environmental Responsibility: Active contribution toward waste reduction and recycling.

Integrity & Transparency: Ethical dealings with clients, partners, and consumers.

Innovation: Continuous improvement through modern technology and smarter processes.

We Follow all Guideline of

**AMERICAN SOCIETY OF HEATING, REFRIGERATING AND AIR-
CONDITIONING ENGINEERS (ASHRAE)**

Guidelines for Isolated Indoor Smoking Zone

Introduction to the BUDDY BIN Initiative

The BUDDY BIN initiative represents a forward-thinking approach to environmental sustainability, focusing on the recycling and repurposing of cigarette butts, which are frequently improperly disposed of as waste. This program aims to mitigate pollution and contribute to the development of a circular economy.

PROCESS OVERVIEW

1 Collection

A specialized task force dedicated to the BUDDY BIN initiative will be established. This team will consist of trained personnel who will be equipped with appropriate uniforms, safety gear, and comprehensive training regarding proper waste management practices. Their primary responsibility will be to identify and collect cigarette butts from strategically placed BUDDY BINs in various locations.

2 Regular Collection Schedule

The BUDDY BIN team will establish and implement a systematic schedule for the regular collection of cigarette butts from designated bins. This process will ensure that the bins remain adequately maintained and facilitate efficient recycling operations.

Service Portfolio

3 Material Separation

Following the collection of cigarette butts, the team will conduct a thorough separation process. This will involve meticulously extracting cigarette paper and tobacco from the filters, thereby maximizing the efficiency of the recycling process and ensuring that each component is processed appropriately.

4 Organic Fertilizer Production

The separated paper and tobacco will be converted into high-quality organic fertilizers. These fertilizers are intended to enhance soil health and promote plant growth, serving as an environmentally friendly alternative to synthetic fertilizers.

5 Recycling Filter Material

The filters will undergo a stringent decontamination process to eliminate any harmful substances before being repurposed into various consumer products, such as soft toys and other useful items. This step not only addresses waste management but also raises consumer awareness regarding sustainable practices.

Benefits of the BUDDY BIN Initiative

Environmental Improvement

The BUDDY BIN initiative aspires to significantly decrease littering and pollution associated with cigarette butts, resulting in a cleaner, more aesthetically pleasing environment for both communities and wildlife.

Promotion of Environmental Awareness

By implementing a recycling program for cigarette waste, the BUDDY BIN initiative aims to mitigate the adverse effects on ecosystems, thereby fostering a greater understanding of environmental responsibility among individuals and communities.

Current Progress

We are pleased to report that substantial progress has been made in advancing this initiative. The recycling process has been meticulously designed and tested, and the prototype for the BUDDY BIN product has been finalized. With the necessary infrastructure established, we are poised to implement the program and enact positive change within our communities.

Types of Smoking Zones

Covered Smoking Zone

Indoor Smoking Rooms/Lounges:

These are designated, enclosed areas located within buildings, such as airports and offices. They are typically equipped with high-capacity air filtration systems, automatic closing doors, and negative air pressure mechanisms to prevent the escape of smoke.

Indoor Smoking Zone

Smoking Cabins (Indoor/Outdoor):

These units are self-contained and portable. Indoor smoking cabins allow individuals to congregate in a designated space, while outdoor cabins are positioned outside buildings to minimize the impact of smoke near entrances.

Outdoor Smoking Zone

Designated Outdoor Smoking Areas (DOSAs):

These areas consist of open-air spaces, including patios, balconies, or specific corners in parks and workplaces. They are strategically located away from windows and pedestrian pathways to reduce exposure to secondhand smoke.

Smoking Lounges / Cigar Bars

Smoking Lounges/Cigar Bars:

These specialized establishments are designed exclusively for smoking and may operate legally under specific regulatory conditions, even in the presence of broader public smoking restrictions.

Key Features of Modern Smoking Zones

Ventilation Systems

Ventilation Systems: Most indoor smoking zones necessitate the installation of ventilation systems that effectively direct smoke outside, avoiding recirculation within the building.

Signage

Signage: Clearly marked signage is provided in both English and local languages to indicate the boundaries and regulations of smoking areas.

Separation

Separation: Smoking zones are typically designed to be structurally isolated in order to comply with applicable health regulations.

Advanced Air Filtration Technology

Pre-Filter (G3)

Our Advanced Air Filtration Technology employs a sophisticated three-stage filtration system designed to deliver exceptional air quality. The first stage features a Pre-Filter (G3), which captures larger particles such as dust and pet hair, ensuring that the more delicate filters are protected.

The second stage utilizes a HEPA H13 filter, renowned for its high efficiency in trapping at least 99.95% of airborne particles that are 0.3 microns or larger, including allergens like pollen and mold spores.

HEPA H13 Filter

Finally, the system is equipped with an activated coconut carbon filter, which effectively adsorbs harmful tobacco gases and unpleasant odors, ensuring that the air not only feels clean but also smells fresh. As a result, you can breathe easy knowing that clean, purified air is being released back into your living space, contributing to a healthier indoor environment.

Our Solutions have transformed unused and dead areas into clean, functional smoking zones, enhancing both aesthetics and utility.

Our Installations

We have successfully implemented smoking solutions across prominent locations, including:

IT Parks & SEZs | Corporate Campuses | Shopping Malls & High-Street Retail | Food Parks & Commercial Complexes
